## Option A

Commvault for multi-cloud workloads

- Entra ID + PAM access layer
- Commvault Cloud: Azure data protection (same platform as on-premises + M365)
- Cloud Rewind: rebuild resource groups, VNets, compute and PaaS configuration
- DevOps / GitHub: Commvault
- Offsite copy: AirGap Protect (Canada) + optional copy to on-premises DCs
- AWS: same platform

## Option B

Rubrik for multi-cloud workloads

- Entra ID + PAM access layer
- Rubrik Security Cloud: Azure data protection (second platform alongside Commvault)
- IaC-based rebuild (Bicep / Terraform in Git) + optional configuration-capture tool
- DevOps / GitHub: Rubrik
- Offsite copy: Rubrik Cloud Vault (Canadian region to confirm)
- AWS: same platform

## Option C

Azure Backup for Azure workloads

- Entra ID + PAM access layer
- Azure Backup + Azure-native PITR (already deployed and running)
- IaC-based rebuild (Bicep / Terraform in Git) + optional configuration-capture tool
- DevOps / GitHub: specialist backup service
- Offsite copy: GRS replica in Canada East (Resource Guard for isolation)
- AWS: native service per cloud
